Art Unit: 2877

1. The following is an examiner's statement of reasons for allowance:
2. As set forth in the previous office action, the art does not teach or suggest the use a probe beam in the overall combination of claims 16 and 17, and claim 25 as amended. Claim 49 claims the illumination of the top surface with a beam of electromagnetic radiation "when at least one of the hot image and cold image are imaged". The remarks filed 12 May 2005 present this language as being direct to the probe beam, stating that the heat may be applied in any manner (remarks, page 16, line 13) and the claim 49 should be allowable "for reasons similar to claim 16", which claims, and is allowable because of, the probe beam. The claimed possibility of the beam being applied during the imaging of the cold image in claim 14, particularly coupled with the comments in the remarks, distinguish the illumination of the surface by the electromagnetic radiation from a heating beam as in Crisman, , Adams et al, and Shepard (see below for comments concerning the latter two references). This, claim 49 is allowable for the reasons set forth in the previous office action for claims 16 and 17.
3. Claim 1 has been amended to recite a method for testing a semiconductor wafer with conductive lines and vias thereon, and that the heating and cooling is "repeated multiple times in a second", which goes beyond the general teaching of the references as applied in the previous office action, which is note directed to such a sample not discloses the claimed rapidity of the heating and cooling cycle.

Art Unit: 2877

4. Adams et al (US 4,854,724) and Shepard (US 6,585,146) both show related thermographic tests in which the object being tested is heated and images of the surface are used to detect defects. Both teach the art-recognized equivalence of heating from the front and the rear; compare figures 1 and 2 of Adams et al and figures 1 and 2 of Shepard. Neither tests patterned semiconductor wafers, and neither teaches the heating and cooling cycle of "multiple times a second" as now in claim 1.

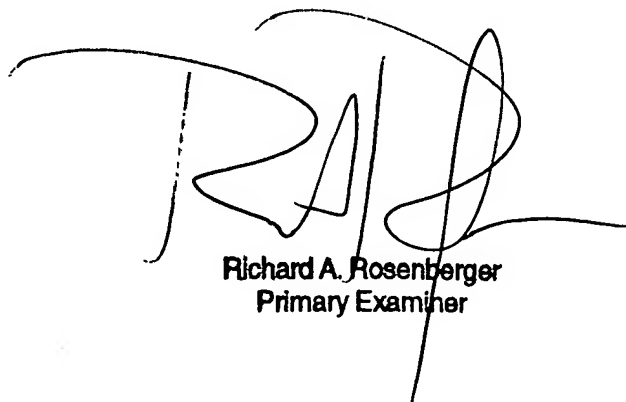

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Richard A Rosenberger whose telephone number is (571) 272-2428. The examiner can normally be reached on Monday through Friday during the hours of 8:00-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gregory J. Toatley, Jr. can be reached on (571) 272-2800 ext. 77. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
